

DRAFT Strategic Approach to Chemical Data Reporting – Inorganic Byproducts Negotiated Rulemaking

**Options Sub-Group Discussions (July – August 2017) and
Second FACA Meeting: August 16-17, 2017**

FACA charge: To negotiate a rulemaking to limit the reporting requirements under Section 8 (a) for manufacturers of any inorganic byproducts, when such byproducts, whether by the byproduct manufacturer or any other person, are subsequently recycled, reused, or reprocessed.

Options Sub-Group Role: To discuss and refine ideas generated by the Committee, and bring back possible ideas, options, or proposals for the whole Committee's consideration. The Workgroup does not have the authority to make any final substantive decisions.

Objectives:

- Ensure that necessary information on the byproduct chemical substances such as potential exposure and amounts is not lost
- Ensure that proposed options enable the Agency to continue to evaluate these chemical substances as is done for all other chemical substances
- Meet the statutory requirements expressed in the FACA charge
